

OBJECTIVE

Detail-oriented Cybersecurity student with a strong foundation in network security, threat analysis, and incident response. Combines theoretical knowledge of security monitoring and log analysis with a practical focus on vulnerability management. Currently pursuing a Bachelors in Cybersecurity and seeking an Incident Response internship to help monitor, detect, and mitigate threats in an active operational environment.

CERTIFICATIONS

Introduction to Cybersecurity – Harvard CS50 | [Certificate](#)

- Studied cryptography, network threats, and web vulnerabilities (SQLi/XSS) to understand attacker behavior and secure IT infrastructure.

CompTIA Network+ (Exam N10-009) | In Progress

- Studying enterprise networking concepts, including OSI and TCP/IP models, subnetting, and routing protocols, to better analyze network-level attacks.

Foundations of Cybersecurity – Google, Inc | [Certificate](#)

- Applied standard security frameworks (CIA triad, NIST, CISSP domains) to evaluate threats and recommend system defenses.

Introduction to Database with SQL – Harvard CS50 | In Progress

- Learning database architecture and advanced querying (SQLite, MS SQL Server) to investigate SIEM logs and identify backend vulnerabilities.

Linux Essentials – FreeCodeCamp, Inc | [Certificate](#)

- Configured Linux defenses using advanced permissions, SSH security, UFW, and Fail2Ban to support incident triage via the command line.

Cybersecurity Professional Certificate – Google, Inc | In Progress

- Completed:** *Play It Safe: Manage Security Risks* (Evaluated threat models and audited security controls using the NIST framework). | [Certificate](#)
- Current Course:** *Connect and Protect: Networks and Network Security* (Learning to secure enterprise network architectures and analyze traffic).

Introduction to SQL & Intermediate SQL – DataCamp | [Certificate](#)

- Used SQL queries (filtering, joins, aggregates) to parse and correlate large datasets for threat-hunting workflows.

Wireshark (Network Traffic Analysis) – IBM SkillUp | In Progress

- Analyzing network traffic and packet captures (PCAPs) using Wireshark to detect network anomalies and security incidents.

PROJECTS & PRACTICAL APPLICATION

Threat Intelligence Analysis (CS50 Final Project) | [Youtube](#)

Wrote an OSINT report on the 2026 Handala APT breach, documenting how the group used credential harvesting to exploit the gap between enterprise and personal security controls.

Automated Threat Intelligence Tool (Python) | [Github](#)

Wrote a Python script using the VirusTotal API to automatically check if IP addresses and file hashes are malicious, speeding up the triage process for Indicators of Compromise (IoCs).

Local SIEM Implementation (Wazuh)

Installed and configured a Wazuh SIEM on Linux to collect system authentication logs. Built custom dashboards to monitor login activity and practice triaging security alerts.

Custom Linux Hardening & IDS Setup

Secured a local Linux Mint environment by configuring UFW (Uncomplicated Firewall) rules and deploying Fail2Ban to automatically detect and block simulated brute-force SSH attacks.

Python Network Port Scanner

Developed a lightweight port scanner in Python using the socket library to identify open network ports and running services on local virtual machines.

EDUCATION

GRADUATION

Sir Syed University of Engineering & Technology | BS Cybersecurity

HIGH SCHOOL

Govt. Delhi Science College | Computer Science

SECONDARY SCHOOL

TFS Schooling System | Computer Science
